**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Specification***

1. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: The “changing device” claimed in claim 1 has been indicated as both guide grooves 19 and slide grooves 21 on page 15. It causes confusion.

### ***Claim Objections***

2. Claims 7 and 9 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim 6. See MPEP § 608.01(n). Accordingly, the claims 7-10 have not been further treated on the merits.

3. Claim 2 is objected to because of the following informalities: The “said driving power source” lacks antecedent basis. Appropriate correction is required.

The following rejections are based on an assumption that “said driving power source” is “said drive power source”.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by JP10-51712 (hereon JP'712).

JP'712 teaches an electronic apparatus (fig. 11) having a movable portion (1) to be moved by a drive power source (13) between a first position (fig. 12c) and a second position (12a) against a main body (4), comprising: pushing device (5) for pushing said movable portion between the first position and the second position, and changing device (10) for changing a pushing force of said pushing device to push said movable portion between the first position and the second position (claim 1); a load on said drive power source near said first position is greater than a load near said second position due to different angular relationship, the pushing force will eventually be changed gradually for pushing said movable portion as claimed (claims 2-5); and further comprising a pushed member (11) to contact with said changing device and a pushing member (8) to push said pushed member toward said changing device, wherein said changing device is disposed in one of said movable portion and said main body (at position of 11) and said pushing device is disposed in the other of said movable portion and said main body (at position of 8) (claim 6).
